A note about the SCALE EXPERIMENT data sheets: files with the stems 'vers1' and 'vers2' of each scale experiment have some minor differences: Some free response answers in 'vers1' are compressed into one column, while in 'vers2' they are spread out over two columns (e.g. 'blueBlack' vs 'blue' 'black').   In these cases I added a second column called 'answer hold' next to the compressed column such that both 'vers1' and 'vers2' have the same number of columns.   For example:

Vers1:

	BY	BZ	
	Answer.firstViewDescri	answer hold	A
. 1	Blue and gold		fe
. 1	{}		fe
. 1	blue and black		m
. 1	I saw gold and white.		m
. 1	N/A		m
. 1	{}		m
	white		
. 1	gold		fe
1	Blue Black		m

Vers2:

	BY	BZ	CA	
	Answer.first\	Answer.first\	Answer.genc	An:
(	{}	{}	male	{}
(	gold	white	male	{}
(	gold	white	female	{}
(	{}	{}	male	Bla
(	{}	{}	female	{}
(	Gold in a blu	White in a bl	female	Blu
(	{}	{}	female	wh
(	gold	blue	male	blu
